

Full Stack Assessment 2026-02-05

Assignment

Below is an interactive dashboard. Your task is to recreate it as a standalone React/TypeScript + Python backend application that serves mock data via API calls. Use the artifact as your design reference.

Guidelines

- **Time:** ~2 hours at home. Don't spend more and however far you get is fine.
- **Stack:** React + TypeScript + Python. Everything else is your call (styling, scaffolding, charts, state management, folder structure).
- Submit by pushing to a GitHub repo and sharing the link with us.
- Include a brief README with any notes on your approach or what you'd do next.

Next Steps

After submission there will be an hour long in-person session where you'll walk us through what you built and we'll pick up where you left off.

What We Care About

How you prioritize and the decisions you make.

Reach out if anything is unclear.
